A PERFORMANCE ON RECENTLY PUBLISHED MODELS

Tables A.1 and A.2 combine the results from the main paper with runs of GPT-6 Luna and GPT-6.1 Sol on each of the 69 CSVStorm files, plus a new GPT-5.6 Luna full-agentic pass. New model names are marked "(new)". The GPT-6 models used default medium reasoning effort and fresh API requests without local response-cache reuse. The Hybrid+DuckDB variant was evaluated only with the new models. The GPT-6 custom-parser-code rows use later 69-file passes that captured API usage; Table A.3 reports the additional measured passes and the earlier GPT-6 Luna pass. Figure A.1 shows selected models across the hybrid, full-agentic, and custom-parser-code approaches. Earlier GPT-5 custom-parser-code runs did not record API usage.

	System	SuT Success [%]	Pollock Score	Accuracy [%]
Hybrid	GPT-5.6 Sol	100.0	9.94	82.6
	GPT-5.6 Luna	100.0	9.71	73.9
	GPT-5.4 Mini	94.2	9.23	63.8
	Qwen3.5 0.8B	100.0	7.53	27.5
	GPT-6 Luna (new)	100.0	9.93	79.7
	GPT-6.1 Sol (new)	100.0	9.94	84.1
H+DB	GPT-6 Luna (new)	100.0	9.93	84.1
	GPT-6.1 Sol (new)	**100.0**	**9.94**	**85.5**
Full Agentic	GPT-5.6 Sol	98.6	9.57	73.9
	GPT-5.6 Luna	87.0	8.38	56.5
	GPT-5.4 Mini	53.6	5.21	37.7
	GPT-6 Luna (new)	89.9	8.67	58.0
	GPT-6.1 Sol (new)	94.2	9.02	66.7
Custom Parser Code	GPT-5.6 Sol	68.1	6.71	44.9
	GPT-5.6 Luna	79.7	7.75	49.3
	GPT-5.4 Mini	95.7	8.46	34.8
	Qwen3.5 0.8B	0.0	0.00	0.0
	GPT-6 Luna (new)	92.8	9.12	60.9
	GPT-6.1 Sol (new)	100.0	9.79	60.9
Baselines	CleverCSV	100.0	8.67	55.1
	DuckDB Parse*	100.0	9.27	40.6
	DuckDB Auto	98.6	8.22	34.8
	PyCSV	94.2	8.73	10.1
	Pandas*	98.6	8.06	33.3

* denotes oracle-assisted parsing with access to file-format metadata such as the dialect.

Table A.1: CSVStorm results on 68 irregular and one control file, extending Table 1. SuT Success measures non-crashing runs. Accuracy measures exact reconstruction. H+DB adds DuckDB dialect sniffing to the hybrid parser. "(new)" identifies the new GPT-6 runs. The GPT-6 custom-parser-code rows use the later independent passes.

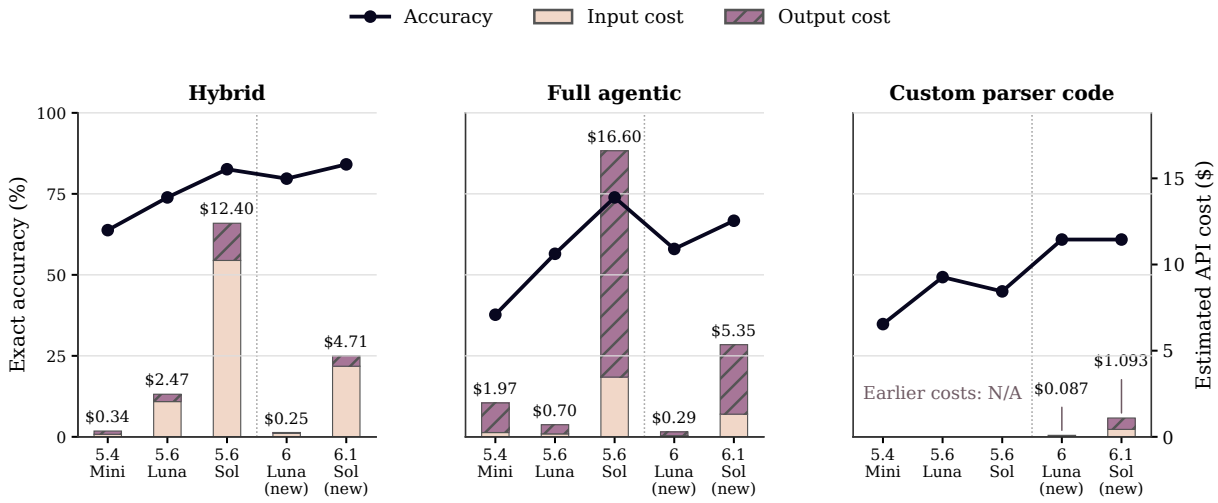

Figure A.1: Exact reconstruction accuracy (line, left axis) and estimated API cost (stacked bars, right axis) for 69-file CSVStorm passes with selected GPT-5.4, GPT-5.6, and GPT-6 models. Each panel is a parser method; bars separate input from output cost. Both axes use the same scale across panels. The later GPT-6 custom-parser-code passes and the GPT-5.6 Luna full-agentic pass use measured token usage, including cached input and cache writes; small custom-parser bars are annotated. Earlier GPT-5 custom-parser-code costs are unavailable. Older hybrid bar totals match Table A.2, with component shares estimated from saved tokens. Costs are estimates based on recorded model rates, not invoice totals.

Model	Acc.	Time		Cost	
	(%)↑	Median (s/file)↓	Total (s)↓	Median ($/file)↓	Total ($)↓
GPT-5.6 Sol	82.6	5.57	1092.54	0.0177	12.3958
GPT-5.6 Luna	73.9	4.64	563.20	0.0049	2.4736
GPT-5.4 Mini	63.8	**2.34**	**269.22**	0.0024	0.3375
Qwen3.5 0.8B	27.5	12.08	1402.32	Local	Local
GPT-6 Luna (new)	79.7	5.74	886.38	**0.00046**	**0.2518**
GPT-6.1 Sol (new)	**84.1**	3.74	618.28	0.00627	4.7109

Table A.2: Performance, runtime, and cost of the hybrid repair approach, extending Table 2. "(new)" identifies the new GPT-6 runs. Local models incur no API charge. New-run costs use recorded token usage and standard API rates and are not invoice totals.

System / pass	Acc.	Time		Cost	
	(%)↑	Median (s/file)↓	Total (s)↓	Median ($/file)↓	Total ($)↓
GPT-6 Luna (new) Custom, Nov. 1	63.8	19.98	1414.92	–	–
GPT-6 Luna (new) Custom, Nov. 4	60.9	17.21	1276.11	0.00107	0.08718
GPT-6.1 Sol (new) Custom, Nov. 4	60.9	17.44	1326.50	0.01327	1.09346
GPT-5.6 Luna Full, Nov. 4	56.5	59.73	3914.46	0.00972	0.70295

Table A.3: Additional independent 69-file passes in November 2026. Custom denotes custom parser code; Full denotes full agentic. The Nov. 1 pass did not save API usage. Nov. 4 costs include cache writes and billed reasoning tokens at standard model rates and are not invoice totals. The full-agentic pass includes one prompt rejected before generation at zero cost.

Timing includes network and provider latency. The Nov. 4 custom-parser-code passes each recorded all 69 API responses. The full-agentic pass recorded 68 responses plus one rejected prompt. The new GPT-6.1 Sol custom and GPT-5.6 Luna full-agentic passes together cost $1.79641, below the $30 budget.
